Learning outcomes for ESUN course on Improving NMIBC patient pathways

Upon completion of the course the participants will be able to:

- Describe the epidemiology, risk factors and treatment options for non-muscle invasive bladder cancer (NMIBC)
- Understand the management and treatment of side effects of intravesical therapies
- Know safety regulations when handling intravesical instillations
- Understand the importance of effective communication and skills required for interacting with our bladder cancer patients and families
- Learn how to develop additional nurse-led services within your hospitals and communities
- Describe the importance of quality of life needs and what is required to improve the patients with NMIBC pathways
- Take home ideas for improving local bladder cancer pathways with knowledge, networking and collaboration with colleagues through an excellent interactive workshop
