

EAUNwebinar

Follow-up care after radical cystectomy

May 14, 2025

19:00 – 20:00 CEST (18:00 – 19:00 GMT)

This webinar aims to provide a comprehensive understanding of follow-up care after radical cystectomy. Experts will discuss urine markers for survival prediction and timely oncological referrals, strategies for managing late post-surgical complications, and the development of dedicated clinics to support individualised patient needs. The session will also address sexual health, stoma care, dietary considerations, mental health, and psychological support.

Learning objectives

In this webinar, participants will:

- Improve their knowledge and understanding of follow up care following radical cystectomy.
- Gain insights into how urine biomarkers can predict survival outcomes and support proactive referrals for oncological treatment.
- Learn how to effectively monitor and manage patients after radical cystectomy, including recognising early signs of complications and coordinating multidisciplinary care.
- Understand the impact of radical cystectomy on sexual health and learn strategies to provide holistic patient-centred support.

Programme

Moderators: B.T. Jensen, Aarhus (DK)
K. Chatterton, London (GB)

19:00 – 19:05 Introduction

19:05 – 19:20 Urine marker -prediction for survival and proactive referral to oncological treatment

T. Karmark Dreyer, Aarhus (DK)

19:20 – 19:35 Late events after RC - a new clinic to support and manage late events (individual issues)

T. Juul, Aarhus (DK)

19:35 – 19:50 Sexual health: Quality of life, stoma issues, dietician issues, mental health and psychological support

t.b.c.

19:50 – 20:00 Discussion and conclusion

B.T. Jensen, Aarhus (DK)
K. Chatterton, London (GB)
